

ADVANTAGES

- An angled diffuser plate with 51% open area.
- The angle and open area contribute to static regain.
- At 500 feet per minute velocity, the total resistance to airflow across the unit is less than 0.10" w.g.
- All components are weatherproof for interior or exterior installation.
- A short inline depth of only 12" conserving valuable space for other HVAC system components.
- Pre-drilled standing flanges to mate to existing HVAC equipment.
